

风影

心隐

Mind of the Wind

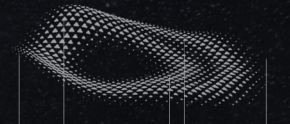

透明柱体内部充气，使整个装置漂浮，下端骨架圆环穿过两条场地中的平行线，使装置在风的吹动下可沿线滑动，响应场地广袤的氛围，增加装置的自由度与可变性。

The inside of the transparent cylinder is inflated to make the whole device floating. The lower end of the skeleton ring passes through the parallel lines in the two fields, so the device can slide along the line with the wind blowing, responding to the vast atmosphere of the site, increasing the freedom and variability of the device. The inside of the transparent cylinder is inflated to make the whole device floating. 风吹动光，与夜空私语。

The wind blows light and whispers with the night sky.
